Over the past 20 years, software architectures have significantly contributed to the development of complex and distributed systems. Nowadays, it is recognized that one of the critical problems in the

design and development of any complex software system is its architecture, i.e. the organization of its architectural elements. Software Architecture presents the software architecture paradigms based on objects, components, services and models, as well as the various architectural techniques and methods, the analysis of architectural qualities, models of representation of architectural templates and styles, their formalization, validation and testing and finally the engineering approach in which these consistent and autonomous elements can be tackled.

Health care is primarily about people-to-people interactions. It is about understanding, diagnosis, physical contact, communication, and, ultimately, providing care. By bringing people together, telecommunication technologies have the potential to improve both the quality of and access to health care in the remotest areas of the developing world. Telemedicine offers solutions for emergency medical assistance, long-distance consultation, administration and logistics, supervision and quality assurance, and education and training for healthcare professionals and providers. This book aims to redress the relative lack of published information on successful telehealth solutions in the developing world. It presents real-life stories from Asia, Africa, and Latin America. It is rich in practical experience and will be of interest to health professionals, development workers, and e-health and telehealth proponents interested in learning about, or contributing to the implementation of, appropriate solutions for 80% of the world's population.

Floyd Gray explores how the treatment of controversial subjects in French Renaissance writing was affected by rhetorical conventions and the commercial requirements of an expanding publishing industry. Focusing on a wide range of discourses on gender issues--misogynist, feminist, autobiographical, homosexual and medical--Gray reveals the extent to which these marginalized texts reflect literary concerns rather than social reality. His new readings of Rabelais, Montaigne, Louise Labé and others, challenge the inherent anachronism of criticism that fails to take account of the cultural context of the period.

This text is a revision of our highest-level, most strategic, introduction to MIS text. What sets this book apart from others is its managerial focus and its unique case approach. In addition, the new, fourth edition has been revised for currency throughout and offers new end of chapter real world cases.

An introduction to the developing field of telemedicine, this text explores all the major aspects of telemedicine and explains what it is and why it is growing in importance. It explains how to assess the need for telemedicine service and how this can be developed and evaluated.
